Create Function App

Basics Storage Networking Monitoring Deployment Tags Review + create

Create a function app, which lets you group functions as a logical unit for easier management, deployment and sharing of resources. Functions lets you execute your code in a serverless environment without having to first create a VM or publish a web application.

Project Details

Select a subscription to manage deployed resources and costs. Use resource groups like folders to organize and manage all your resources.

Subscription * Azure subscription 1

Resource Group * (New) azure_function

Create new

Instance Details

Function App name * luisazurefunction.azurewebsites.net

Do you want to deploy code or container image? *

Code Container Image

Runtime stack * .NET

Version * 6 (LTS)

Basics Storage Networking Monitoring Deployment Tags Review + create

Function Apps can be provisioned with the inbound address being public to the internet or isolated to an Azure virtual network. Function Apps can also be provisioned with outbound traffic able to reach endpoints in a virtual network, be governed by network security groups or affected by virtual network routes. By default, your app is open to the internet and cannot reach into a virtual network. These aspects can also be changed after the app is provisioned. [Learn more](#)

Enable public access * On Off

⚠️ Network injection is only available in Functions Premium and Basic, Standard, Premium, Premium V2, Premium V3 Dedicated App Service plans.

Enable network injection On Off

Azure Monitor application insights is an Application Performance Management (APM) service for developers and DevOps professionals. Enable it below to automatically monitor your application. It will detect performance anomalies, and includes powerful analytics tools to help you diagnose issues and to understand what users actually do with your app. Your bill is based on amount of data used by Application Insights and your data retention settings. Enable GitHub Actions to continuously deploy your app. GitHub Actions is an automation framework that can build, test, and deploy your app whenever a new commit is made in your repository. If your code is in GitHub, choose your repository here and we will add a workflow file to automatically deploy your app to App Service. If your code is not in GitHub, go to the Deployment Center once the web app is created to set up your deployment. [Learn more](#)

Screenshot of a Windows File Explorer window showing the 'Downloads' folder. A context menu is open over a file named 'StorageExplorer-windows-x64'. The menu includes options like Pin to Quick access, Copy, Paste, Move to, Copy to, Delete, Rename, New folder, New item, Easy access, Properties, Open, Select all, Select none, Invert selection, and Select.

The main pane displays a list of files and folders in the 'Downloads' folder:

Name	Date modified	Type
StorageExplorer-windows-x64	6/19/2023 9:46 AM	Application
AzureFundamentals-master	6/16/2023 1:40 PM	File folder
AWS_Sample2_listS3Buckets-master	6/15/2023 9:16 AM	File folder
service-fabric-dotnet-getting-started-master	6/12/2023 10:15 AM	File folder
Books_API-master	6/12/2023 8:21 AM	File folder

A 'Select Setup Install Mode' dialog box is overlaid on the window, prompting the user to choose between 'Install for me only (recommended)' and 'Install for all users'. The 'Cancel' button is also visible.

At the bottom of the screen, the taskbar shows the following icons:

- Windows Start button
- Type here to search bar
